2.5.1: Mechanism of internal/ external assessment is transparent and the grievance redressal system is time- bound and efficient

Response:

The institute is affiliated with Sant Gadge Baba Amravati University, Amravati. The Board of Studies (BOS) for Engineering and Management designs and develops the curriculum for the programs according to guidelines from AICTE/UGC.

The institute is steadfastly dedicated to excelling in all our endeavours through an impartial and transparent system. The institute's academic calendar is thoughtfully designed to guide students throughout the academic year. Right from the beginning of each semester, students receive comprehensive information about the assessment methods to be employed. Student performance evaluation comprises two key components: Continuous Internal Assessment and the University Examination.

In theory courses, evaluation is out of 100 marks, with 80 marks attributed to the university examination and 20 marks designated for internal assessment. Practical courses encompass 50 marks, divided into 25 marks for continuous internal assessment and 25 marks for an external practical exam. Project courses for undergraduates (UG) are evaluated out of 150 marks, with 75 marks for internal assessment and 75 marks for external evaluation, including a project viva. Postgraduate (PG) project work is worth 200 marks, with individual student responsibility. Seminar courses are assessed for a total of 50 marks. Internal Assessment in theory courses includes class tests and assignments, with a standard weightage of 20%, while the university examination, spanning three hours, covers the entire course syllabus and constitutes the remaining 80% of the evaluation. Project progress is consistently monitored, with rubrics

guiding the evaluation process. Students receive these rubrics in advance to prepare accordingly. Results are accessible to students on the SIS Portal, with a process for corrections.

External Assessment: Sant Gadge Baba Amravati University (SGBAU) oversees the conduct of both theory and practical examinations. The marks allocated for each subject adhere to the prescribed syllabus structure. The university provides examination schedules to its affiliated colleges. For theory examinations, paper setting and evaluation are entrusted to subject experts appointed by the university, with the subject chairman overseeing the process. In the case of laboratory and project final examinations, both internal and external examiners from other institutions, appointed by the University, participate in the assessment.

Grievance Resolution at Different Levels:

Departmental Level: Faculty conduct on-going evaluations, including theory lectures, labs, assignments, and class tests. Internal marks are posted on the SIS portal, and students can openly discuss concerns with faculty, the Head of the Department (HOD), and the Dean Exams. A retest is conducted for students who are absent during class tests due to genuine reasons.

Institute Level: The Dean Exams oversees the administration of Sant Gadge Baba Amravati University (SGBAU) exams at the institute. Issues are addressed by the institution's Officer In-Charge, often in coordination with a university-appointed officer. Grievances during online or theory exams are resolved through discussions with the principal and, if needed, escalated to the university via the examination section.

University Level: Queries about university examinations and results are handled by the SGBAU Amravati University examination section, which are submitted through the college examination section. Students can request revaluation or recounting from the university if they are dissatisfied with the university's initial evaluation

Mechanism to deal with internal examination related grievances

- Class Tests (CTs), internal exams, are scheduled on specific dates outlined in the academic calendar.
- Within 4 days following the CTs, respective subject teachers evaluate the answer books.
- Evaluated answer books are promptly shared with students, and within 3 days, the model answer sheet is discussed or displayed.
- Students have an 8-day window after the examinations to submit grievances or request corrections regarding their marks.
- The concerned faculty, after investigation, makes the necessary corrections.
- The subject teacher is responsible for submitting any necessary corrections concerning the statement of marks to the Dean's office through the HOD within 10 days post-examination.
- If students are absent for the class test due to genuine reasons, they are allowed to appear for a class retest after due verification.

Examination Policy

The efficient grievance redressal systems and transparent assessment mechanisms are the foundational pillars of an accountable and effective educational institution. They ensure fairness, uphold academic integrity, and significantly contribute to fostering a positive and satisfying learning experience for students. At SSGMCE, our unwavering commitment lies in continually striving to cultivate high-quality scientific and technical manpower while providing solutions to a diverse range of challenging technological problems that may emerge across various fields. This commitment is realized through our dedicated and well-qualified faculty and highly skilled supporting staff. Our goal is to emerge as one of the foremost centres for teaching, research, and extension in Engineering and Management. The institute is resolutely dedicated to excelling in every facet of our endeavours through an impartial and transparent system.

Assessment Components

Student performance in each course is evaluated through a two-fold approach:

Continuous Internal Assessment: Throughout the semester, students undergo continuous internal assessment. The assessment criteria may vary depending on the type of course.

University Examination: The university examination is a significant component of the evaluation process. It contributes to the overall assessment of student performance.

Specifically:

Theory Courses (100 Marks): In theory courses, the evaluation is out of 100 marks. Of these, 80 marks are allotted for the university examination and 20 marks are allotted for internal assessment.

Practical Courses (50 Marks): Practical courses have a total of 50 marks. This includes 25 marks for continuous internal assessment and 25 marks for an external practical exam conducted by the university. In certain courses, the entire 50 marks are designated for continuous internal assessment.

Project Courses (UG): Project evaluation is out of 150/200 marks. Of these, 75/100 marks are attributed to internal assessment, and the remaining 75/100 marks are allocated for

external evaluation. The external evaluation includes a project viva conducted by an external examiner appointed by the university.

Project Work (PG): PG students are allocated 200 marks for their project work. In this case, individual students are responsible for completing their dissertation work. However, in the case of Undergraduate (UG) courses, a group of 4-6 students collaborates on a single project.

Seminar Courses (50 /100 Marks): Seminars are evaluated for a total of 50/100 marks.

Evaluation of Theory Courses

In theory courses, the evaluation of learners' performance encompasses two primary components: University examination and Internal Assessment. The allocated relative weightage for these components is 80% for university examinations and 20% for Internal Assessment.

Internal Assessment involves three mandatory components: two class tests, the second is an assignment or Teacher's evaluation component (TEC) and the third component is attendance, accounting for 5 marks as per university guidelines.

The University examination is conducted for 80 marks in accordance with the university's schedule and typically spans duration of 3 hours, covering the entire syllabus of the respective course.

The university-appointed faculty members evaluate Theory Examination papers at the central assessment centre located at the university campus.

Successful completion of both the university examination and Internal Assessment is a prerequisite for awarding grades in theory courses, as outlined in the curriculum manual of the respective program.

Internal evaluation of Theory Course:

Conduction of Class Tests:

The internal evaluation process for theory courses involves the following steps:

At the beginning of each semester, the Dean Exams releases the class test schedule in alignment with the academic calendar. Subsequently, this information is conveyed to the

Head of the Department (HOD) and the departmental Class Test Coordinator, who holds the responsibility for overseeing the conduction of class tests on the designated dates.

The Departmental Class Test Coordinator, in turn, communicates with the respective course teachers, providing them with instructions to compose question papers in strict adherence to the established guidelines and the prescribed format.

The responsibility for crafting the class test question paper rests with the course teacher. Upon completion, the question paper undergoes a rigorous audit conducted by the Academic Monitoring Committee (AMC). The AMC conducts a thorough review of the paper and offers feedback if deemed necessary.

Subsequent to receiving feedback from the AMC, the course teacher undertakes the required revisions to address any identified issues within the question paper. The revised paper is then resubmitted for final approval.

The specific guidelines adhered to when creating class test question papers are as follows:

The question paper encompasses content from two units as outlined in the university syllabus.

For each unit, one primary question is formulated, accompanied by an alternative choice question from the same unit. No internal choices are incorporated within a single question.

Questions may be presented in either long-answer or short-answer formats, with two or three sub-questions featured within short-answer questions. Each question, inclusive of its sub-questions, carries a total of 15 marks.

The class test is administered within a 1-hour timeframe, with a maximum attainable score of 30 marks.

The course coordinator assumes responsibility for maintaining the scheme and solutions for the question paper.

When devising the question paper, the Course Coordinator takes into account the cognitive levels, in accordance with the Revised Bloom's Taxonomy, and aligns the questions with the prescribed Course Outcomes (COs).

Class tests are conducted as per the established schedule.

Class test mark-sheets are accessible to all students through the SIS Portal. If any corrections are needed, students can reach out to the respective faculty members. These corrections are then forwarded to the Dean (Exams) by the respective faculty members through the Head of the Department (HOD). Subsequently, the necessary corrections are made to the class test marks data.

Conduction of Assignments (TEC: Teacher Evaluation Component):

Assignments serve the purpose of evaluating students' comprehension and enhancing their subject knowledge. Throughout the semester, students engage with these components, which helps them maintain focus, stay connected with the subject matter, and ultimately, enhance their learning capabilities. These diverse assignment components prove to be invaluable tools for student development

At the start of the semester, the Dean Exams publishes the list of assignment components (TEC).

Assignments are assigned for each course with the intention of fostering self-learning.

In adherence to the standard list of assignments (TECs), each course entails a minimum of two and a maximum of four components.

The subject teacher for each course determines, announces, and submits the assignment action plan within one week of the commencement of classes.

Documentation and evidence of the assignments undertaken are diligently maintained by every course teacher.

Each student is assessed for one assignment per course in the semester.

Standard List of Teacher Evaluation Components (TECs includes:

1. Tutorials on Syllabus Points
2. Presentation/Seminar on Course Extension
3. Mini-Projects(Design/Fabrication/Simulation/Software/Hardware Development/Survey/Case Studies, etc.)
4. New Experiment Development and Testing
5. Open-Book Test

The details of all the assignment components, including their conduction and evaluation, are outlined below.

Component	Assessment Process
Mini/Term/Short Projects (Design/Fabrication/ Simulation/ Software/ Hardware Development)	<p>This component helps students to gain expertise in their subject; students collect and extract the information related with the topic from different online and offline sources.</p> <p>Students demonstrate their presentations skills by presenting the information.</p> <p>They learn to communicate effectively and express their ideas and opinion about the project work.</p> <p>Students form a group of 2 or 3 and based on their interest select a mini project either hardware or software based.</p> <p>They access information through various resources and summarize the main idea.</p> <p>Evaluation is done by the course teacher after completion of the work based on the rubrics,</p>
Survey/Case studies	<p>Case studies help to increase students' critical thinking and problem-solving skills and motivate them towards learning attitude. Case study is found to be beneficial for students in terms of actively engaging them and allowing them to learn the applications of engineering techniques to solve real world problems. Thus, use of case studies is a pedagogical technique that allows students to apply their theoretical knowledge to practical situations. Students are asked to work upon a case study and evaluation is done by the faculty using rubrics.</p>
Industrial visit/field work and report writing	<p>Industry visit/ field work means sending the students to certain workplaces sites, garages, Industries for doing some practical work.</p> <p>Main objectives of field work are:</p> <ul style="list-style-type: none"> To give the students opportunities for practical experience in the organization. To make them aware about the recent technologies used by industries To remove the fear of project work which they generally do first time in final year. To enable students to understand professional duties and responsibilities of the personnel in the field. To get maximum practical knowledge, Students are supposed to work for two days, preferably on Saturdays and Sundays. <p>Assessment is done on the basis of viva and reports using the rubrics designed for the same.</p>

Open Book Test	Open book test is an assessment method that allows students to refer their notes, text books or other approved material while answering the questions. Questions devised in open book test are such that helps to assess the interpretation of knowledge, comprehension skills and critical thinking skills. Assessment of open book test is done on the basis of Rubrics.
Presentation /Seminar	Presentation of topics in classroom are most valuable to students to share their knowledge, improve their communication skills and to boost their self-confidence, These skills play an important role in their engineering course and also help them in their career advancement. Students give presentation on technical topic of their interest which is relevant to their course. Faculty evaluates students on various aspects and marks are awarded based on rubrics.

Attendance Guidelines

Attendance is mandatory for all theory, tutorial, practical, seminar, and project/ dissertation sessions. According to the University Ordinance, a minimum of 75% attendance is required to maintain eligibility for the current term. Students receive attendance marks based on their class attendance.

Conduction of External Examination

The University examination, encompassing both theory and practical assessments, occurs at the Institute's examination centre according to the prescribed examination schedule. The officer in-charge and the Co-officer, appointed by the university, oversee the overall examination process. The committee, established by the Principal and the Dean (Exams), includes two faculty members as chief invigilators along with supporting staff.

Regarding the University Practical Examinations, the examination timetable is coordinated in collaboration with university authorities. The Principal and Dean (Exams) select committee members, including a Chief Coordinator and one faculty member from each department, to ensure the seamless conduction of these examinations. The Internal and External examiners, along with subject experts, oversee and assess the students' practical performances, and subsequently input the marks into the university's online mark entry portal.

Internal Evaluation for laboratory Courses:

Continuous evaluation of students is conducted during each lab session by the faculty, with a total of 10 marks allocated for this purpose. These marks are awarded based on rubrics, and the average marks obtained across all sessions are taken into account when determining the final internal marks. For practical courses, the total internal marks amount to 25. Out of these, 20 marks are attributed to continuous evaluation, while the remaining 05 marks are designated for a lab test administered at the end of the semester.

Seminar Evaluation:

In their final year, students are required to deliver seminars as an essential component of their curriculum, focusing on the latest engineering technologies. Seminar is assessed and graded with a maximum score of 50 marks. The department provides a structured framework for preparing these seminars, guiding students through the process effectively:

Students are encouraged to select seminar topics that align with their personal interests and reflect recent technological advancements. They draw from reputable sources such as UGC-approved journals, including IEEE and Science Direct. After consulting with their supervisors, they make their final topic selections.

Once topics are chosen, students embark on comprehensive literature surveys to gather in-depth insights and information. This research forms the foundation for their seminar reports.

The department provides a well-defined rubric for seminar evaluation. This rubric covers essential criteria, including the demonstration of knowledge, communication skills, report quality, and the organization of content. It serves as a guiding framework, aiding students throughout the preparation process.

Both the department and supervisors offer valuable support through guidelines and mentorship sessions. These resources help students structure their presentations effectively and enhance their delivery.

During the seminar evaluation, a panel of experts is convened. This panel comprises experienced faculty members and Heads of Departments, ensuring a comprehensive and fair assessment.

Following students' presentations, the panel provides comprehensive feedback that encompasses content, delivery, and report quality. This feedback includes constructive criticism and suggestions for improvement, which students value for their personal and academic development.

The seminars are intentionally designed to spotlight cutting-edge technology integration. This ensures that students remain well-informed about the ever-evolving field of engineering, preparing them to navigate and contribute effectively to this dynamic landscape.

Project Evaluation:

Project Allotment Process

Projects are an integral component of engineering studies, and the final year project at SSGMCE offers students a unique opportunity to immerse themselves in professional engineering practice, addressing intricate and open-ended engineering challenges.

The procedure for project allocation and assessment at SSGMCE is outlined as follows:

Information Sharing: The project coordinator plays a pivotal role by sharing vital information on the notice board. This information encompasses project guidelines, titles of previous year projects and seminars, regulations for industry-sponsored projects, faculty expertise domains, and more. It serves as a valuable resource for students.

Group Formation: Students are instructed to create project groups, with each group comprising no more than six students. They are required to submit their preferences for project areas and titles to the coordinator.

Guide Allocation: Guides are assigned to project groups based on students' interests and faculty availability. This allocation takes place during departmental meetings and is transparently displayed on the notice board. Student groups meet with their assigned guides to finalize their project titles and commence their work.

Evaluation Guidelines: Clear guidelines for project evaluations, including the evaluation schedule, are prominently posted for the benefit of both faculty and students.

Resource Support: To support their project work, students are provided with ample hardware and software resources.

Promoting Innovation: Faculty members actively encourage students to participate in project exhibitions, offering them a platform to showcase their innovative ideas. Students are also motivated to publish their work in reputable journals and conferences.

Project Evaluations: Projects undergo four evaluations at specific intervals within the department. A project evaluation committee, as designated by the Head of the Department (HOD) and the coordinator, assesses the progress of all project groups. Constructive suggestions or corrective actions are provided as necessary. Evaluation data sheets are completed and submitted to the coordinator.

Rubric-Based Evaluation: Student projects are evaluated based on rubrics, which are distributed to students before the project monitoring rounds. This proactive approach allows students to prepare effectively.

Recognition: Based on the evaluation reports, the best projects are identified, and the names of the project groups are forwarded to the Dean (Academic) for recognition.

Project Report: The project coordinator shares the format and guidelines for drafting the final project report. Upon project completion, students follow their respective guide's instructions to

create the project report. The report is reviewed by the guide, and the required number of hardbound copies (one for the departmental library, one for the guide, and one for individual submission) is submitted with the guide's signature.

Final Approval: These project reports are subsequently submitted to the Head of the Department (HOD) and the principal for their final approval.

Project Progress Monitoring

At the beginning of each semester, an academic planner and calendar are meticulously prepared. This calendar includes detailed planning related to project monitoring, ensuring that the process is well-organized and structured. It outlines the various phases of project monitoring, known as PPM1 (Project Progress Monitoring Round 1), PPM2, PPM3, and the final PPM. These phases facilitate continuous project monitoring throughout the semester, allowing for comprehensive assessment and guidance at various stages of the project.

Project Monitoring Schedule

S.N.	Phase	Performance Indicator	Date
1	Phase I –PPM1	Literature survey, Topic selection, objectives of proposed work	Month of August
2	Phase II –PPM2	Planning of project work, problem statement, Methodology, Presentation	Month of September
3	Phase III-PPM 3	Percentage of work completion, Demonstration and presentation	Month of January
4	Phase IV -PPM 4	Incorporation of suggestions, Presentation and demonstration, Results & Conclusion	Month of March

The total weightage of the project work amounts to 150 marks, with 75 marks allocated for internal assessment and 75 marks for external assessment. The project work evaluation process involves both the internal project committee within the department and an external examiner appointed by the university. The external examiner conducts a viva voce examination and assigns marks based on the viva and the presentation of the project work. This comprehensive evaluation approach ensures a fair and thorough assessment of the students' project work.

Efficient Grievance Redressal Systems

Effective and transparent assessment mechanisms, along with efficient grievance redressal systems, are the bedrock of a responsible and proficient educational institution. They ensure fairness, maintain academic integrity, and significantly contribute to providing students with a positive and satisfactory learning experience.

Handling Exam-Related Grievances: Institute and University Levels

Institute Level

In cases where a student is unable to appear for an internal assessment or examination due to medical or genuine reasons, an application with proper documentation allows for the conduction of a retest as per established norms. Upon scrutiny by the class counsellor, approval by the Head of Department permits the student to take the retest, which is then conducted by the respective course teacher. The retest marks are submitted to the Dean Exams for further processing.

Students' grievances regarding their assessments are addressed by showcasing their performance in the answer sheet. Answer sheets of concerned students are reassessed in the presence of the student by the faculty. Any identified corrections in the total marks or assessment of answer books are promptly rectified by the faculty members using a marks correction sheet. This sheet is then submitted to the Dean Exams, who updates the student's

marks in the Student Information System (SIS) portal. The institute follows an open evaluation system where student performance is openly displayed on the SIS portal.

University Level

At the university level, students can request a revaluation of their answer scripts if they receive marks lower than expected, following the payment of a prescribed fee.

The university provides students with photocopies of their answer sheets for evaluation-related concerns, allowing them to request a revaluation if necessary.

In instances during university exams when issues or irregularities arise, like when the exam questions fall outside the syllabus, contain printing errors, or are improperly formulated students submit an application through the officer-in charge and the principal. This application is addressed to the University Examination Controller, requesting necessary resolutions to rectify the grievance. The primary aim is to ensure that students do not encounter any loss in terms of marks.

Que - 27 - a)

① LEO

→

- 1> LEO is low earth orbit.
- 2> It is located in 500 km to 1500 km height from the earth surface.
- 3> LEO orbit covers smaller Area of earth as compared to MEO and GEO.
- 4> It is visible for 15-20 min.
- 5> It rotates around earth at the speed of 7.8 km/sec.

Advantages:

- ① The height of launching of satellite is low
- ② signal power is high.
- ③ strength is high
- ④ time delay is less.

Disadvantages:

- ① More satellite is used for covering earth.
- ② Area (Geographical) covered by LEO satellite is less.

Q: 4) (a) Given: $L_e = -20^\circ$

$$l_e = -30^\circ$$

$$L_s = +30^\circ$$

$$h = 35786 \text{ Km}$$

$$R = 6378.14 \text{ Km}$$

Solution:

The given height is 35786 Km ~~is~~. it is GEO.

So, $\therefore L_s = 0^\circ$

$$\begin{aligned}\therefore \cos(r) &= \cos(L_e) \cdot \cos(L_s) \cdot \cos(L_s - l_e) + \sin(L_e) \cdot \sin(L_s) \\ &= \cos(-20^\circ) \cdot \cos(0^\circ) \cdot \cos(30^\circ - (-30^\circ)) + \sin(-20^\circ) \cdot \sin(0^\circ)\end{aligned}$$

$$\therefore \cos(r) = 0.4698$$

$$r = \cos^{-1}(0.4698)$$

$$\therefore r = 46.7287^\circ$$

Consider, $r_s = 42164 \text{ Km}$

$$r_e = 6378.14 \text{ Km} \quad \text{-- (Given)}$$

$$\begin{aligned}\therefore d &= r_s \left[1 + \left(\frac{r_e}{r_s} \right)^2 - 2 \sin\left(\frac{r_e}{r_s}\right) \cos(r) \right]^{1/2} \\ &= 42164 \left[1 + \left(\frac{6378.14}{42164} \right)^2 - 2 \sin\left(\frac{6378.14}{42164}\right) \cdot 0.4698 \right]^{1/2}\end{aligned}$$

a) i] $T^2 = \frac{4\pi^2 a^3}{\mu}$

$$= \frac{4\pi^2 (6378 + 1000)^3}{3.8960 \times 10^5}$$

$$= 0.74761$$

$$T^2 = 40696470.08 \text{ s}^2$$

$$T = \underline{\underline{6379.37 \text{ s}}}$$

$$\begin{aligned}\text{Circumference of orbit} &= 2\pi a \\ &= 2\pi (6378 + 1000) \\ &= \underline{\underline{46333.84 \text{ km.}}}\end{aligned}$$

Velocity of satellite in the orbit

$$V_s = \frac{46333.84}{6379.37}$$

$$\underline{\underline{V_s = 7.2630 \text{ km/s.}}}$$

ii] $V_r = V_s \cos \theta$

Now,

$$\cos \theta = \frac{r_e}{(r_e + h)}$$

$$= \frac{6378}{(6378 + 1000)}$$

$$(6378 + 1000)$$

Determine the Critical Resistance of DC Generator from it's Open Circuit Characteristics.

AIM: To plot the O.C.C. of DC Generator, to determine its critical resistance.

APPARATUS:

S. N.	Name of Facility	Specifications
1.	D.C. Generator	5.5 kw, 230 v 24A, 1500rpm
2.	DC Ammeter	0 - 2 A
3.	DC Voltmeter	0-300 V
4.	AC Voltmeter	0-600 V
5.	Rheostat	750 Ω/1.2A
6.	Prime mover	10 HP, 440 V, 3-phase I. M.
7.	Dimmerstat	3- phase, 440 V

FORMULA: NA

THEORY:

The Emf induced in d. c. machine is given by the equation.

$$E_g = \frac{P \phi N Z}{60 A} \text{ volts}$$

Where,

- E_g -- Emf Induced
- ϕ -- The flux per pole.
- Z -- Total number of armature conductors
- N -- Speed of generator in rpm.
- P -- Number of poles
- A -- Number of parallel paths in Armature

If the armature is run at constant speed N , the Emf is proportional to flux only, as other terms are constant. Flux per pole is equal to BA or it is proportional to flux density (B), as the area (A) of the pole core is constant. The variation of emf induced with respect to the field current, when the machine is loaded is called open circuit characteristics.

PRECAUTIONS:

1. Keep three-phase dimmerstat at zero position before switching on the supply.
2. Run the prime mover in proper direction.

PROCEDURE:

1. Start the prime-mover and run it at rated speed of d.c generator.
2. Note down the residual voltage generated, before exciting the field winding of generator.
3. Excite the field winding by giving DC voltage to field winding.
4. Increase the field current in steps and note down the corresponding terminal voltage of generator up to its 120% of rated voltage.

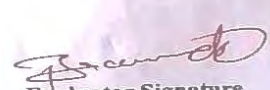

GRAPH:
Induced emf E_g Vs field current I_f

RESULT:
Critical resistance = 300 Ohm.

QIVA QUESTIONS:

1. What is the working principle of DC generator?
2. What is residual voltage?
3. How the polarity of Induced voltage in generator gets altered?
4. What is the meaning of critical resistance of a DC generator?
